

Ortofon Premium Libelle

The Ortofon Premium Libelle provides a full 360-degree overview with 1-degree precision, enabling precise turntable leveling. Precise leveling is essential for optimal tonearm performance. It ensures accurate tracking, reducing distortion and minimizing unnecessary record and stylus wear.

Engineered for accuracy

Developed by Ortofon, the Premium Libelle is designed to deliver precise horizontal alignment of your turntable. Crafted from anodized aluminum in a refined black finish, it reflects Ortofon's signature design language. The integrated wave-pattern surface ensures a secure and controlled grip during adjustment. Each unit is individually tested to guarantee measurement accuracy and consistent performance.

A foundation for performance

Accurate leveling is a critical foundation for high-fidelity playback. Even minor deviations can affect tracking performance and channel balance. The Premium Libelle allows you to fine-tune your setup with precision, supporting stable playback and preserving the integrity of your records.

Improve your listening experience

A well-calibrated turntable performs at its best with correct setup and proper maintenance.

A record brush removes dust and debris, reduces surface noise and preserves signal clarity, and extends the life of your records.

A stylus brush maintains a clean contact point between stylus and groove, supporting consistent signal retrieval. A record stabilizer minimizes unwanted vibrations, improving stability and overall playback clarity.

These accessories are essential for optimal performance and long-term reliability. Together with the Premium Libelle, they support a stable and refined listening experience.
