

Clear View with Non-glare Coating

Viewers can be annoyed by unnecessary reflections when watching a screen under brightly lit conditions. The UH5F-H series has resolved such inconveniences by increasing the level of haze, which enhances visibility and text readability.

ULTRA HD Resolution

With a resolution that is 4 times higher than FHD, it makes the color and details of the contents more vivid and realistic. In addition, the wide viewing angle applied with an IPS panel, provides clear content with virtually no distortion.

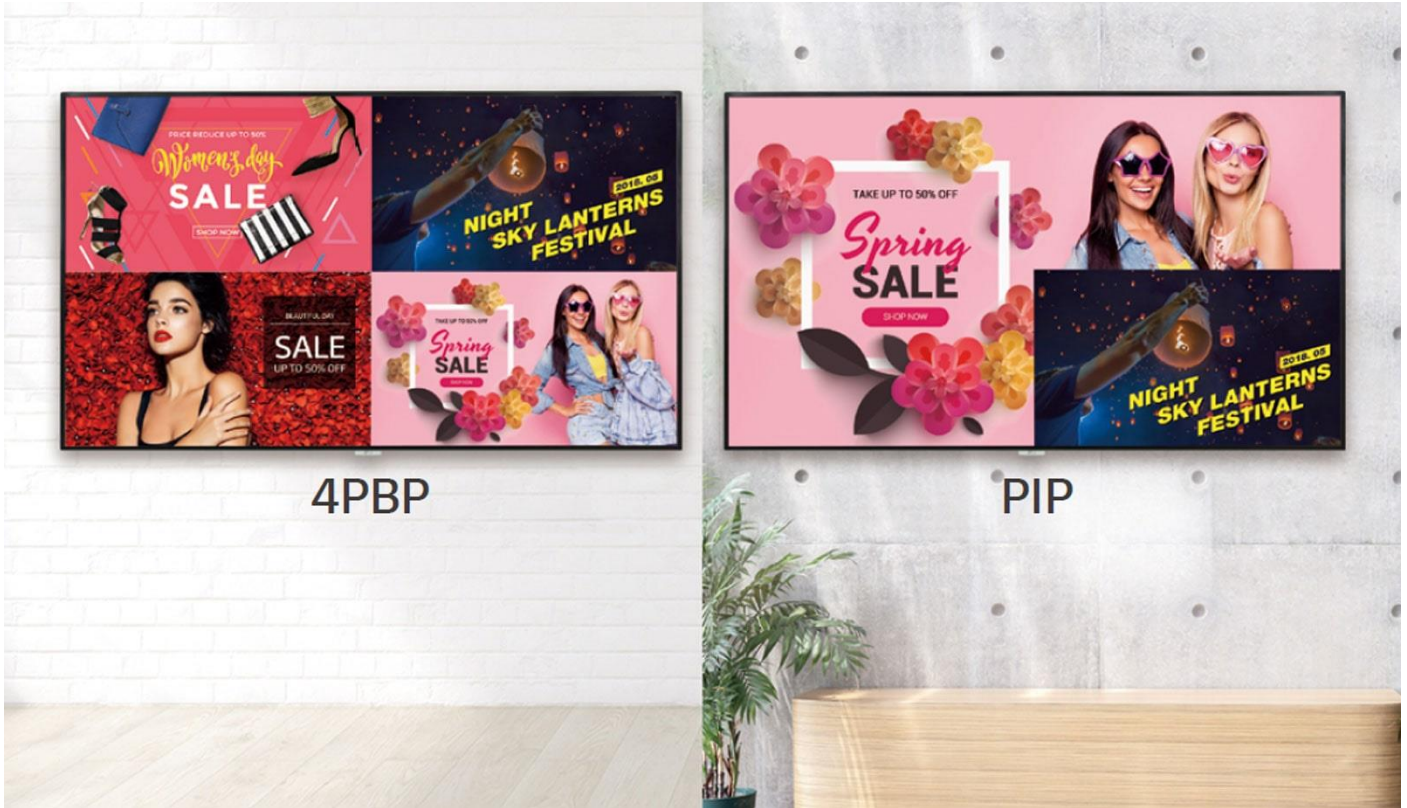

High-Performance with webOS™

Built-in Quad Core System on Chip (SoC) can execute several tasks at once while providing smooth content playback without the need for a media player. Also, LG webOS™ platform enhances user convenience with intuitive graphical user interface (GUI) and access to an advanced ecosystem of third-party development applications.

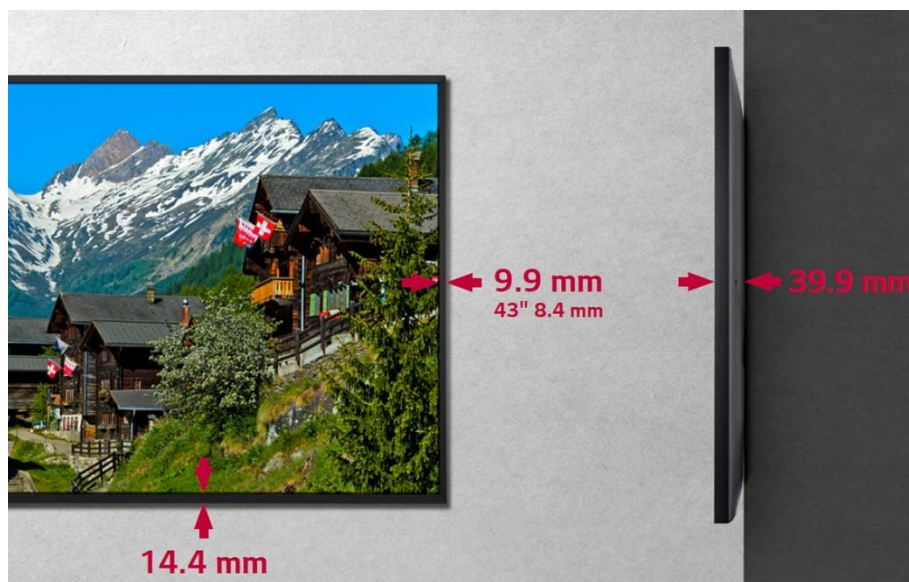

Multiscreen Feature with PBP / PIP

PBP (Picture-By-Picture) features multiple screens in a single display with up to 4 input sources while PIP (Picture-In-Picture) supports playing both a main screen and a subscreen at the same time with various layouts. This gives great flexibility to allocate space for each content source.

Narrow Bezel & Slim Depth

This series has a small bezel size and thickness, which saves space and enables easy installation. In addition, it provides an immersive experience and has a sophisticated design that improves the décor of the space where the product is installed.

Fine Adjustment

The UH5F-H series is equipped with a "horizontal sensor" which shows users how the device is tilted, so that it can be precisely installed.
